

Here are step-by-step instructions to buy **USDC** on the **ERC-20/ETH network** (Ethereum-based) using the **Exodus app**. Exodus supports buying USDC directly via integrated third-party providers like Ramp Network, MoonPay, or XO Pay (for eligible U.S. users), and you can specify the ERC-20/ETH network during the process or ensure delivery to your Ethereum wallet address.

Important notes before starting:

- USDC on ERC-20 requires **ETH/Ethereum** in your Exodus Ethereum wallet to cover gas fees for any future transfers/swaps (though the purchase itself is handled by the provider).
- Availability of providers, fees, and supported payment methods (credit/debit card, bank transfer, Apple Pay, Google Pay, etc.) vary by location (e.g., U.S. users in certain states may have access to XO Pay).
- Exodus delivers the purchased USDC directly to your wallet on the selected/supported network (ERC-20/Ethereum/ETH is fully supported).
- Always double-check fees, exchange rates, and KYC requirements from the third-party provider.
- If you're in the U.S., XO Pay may be an option in the mobile app for direct purchases.

Steps to Buy USDC (ERC-20) in the Exodus Mobile App

1. **Open the Exodus app** on your mobile device (iOS or Android) and unlock your wallet with your PIN or biometrics.
2. **Navigate to the Buy section**:

- Tap the **Buy & Sell** icon (often at the bottom navigation bar or in the main menu).
 - Alternatively, tap the menu icon (three lines or similar) and select **Buy Crypto** or **Buy & Sell**.
3. **Select the Buy tab** (if separate tabs for Buy/Sell appear).
 4. **Choose USDC as the asset**:
 - Search for or scroll to **USDC ETH**
 5. **Enter the purchase amount**:
 - Input the amount you want to buy (either in fiat like USD or in USDC quantity).
 - The app will show the estimated fees, exchange rate, and total cost.
 6. **Select your payment method and provider**:
 - Choose your preferred fiat payment option (e.g., credit/debit card, Apple Pay, Google Pay, bank transfer, etc.).
 - The app may offer providers like **Ramp Network**, **MoonPay**, or **XO Pay** (U.S.-specific). Select one (availability depends on your region and app version).
 - If multiple providers are shown, pick the one with the best rate/fees for your needs.
 7. **Review and confirm the details**:
 - Double-check the amount, network (ensure ERC-20/Ethereum/ETH), fees, and delivery address (it should be your Exodus Ethereum wallet address).
 - Proceed to complete the payment through the selected provider (you may be redirected to their secure checkout page in a browser or in-app).

8. **Complete the purchase**:

- Follow the provider's prompts to verify identity (KYC if required for larger amounts), enter payment details, and confirm.
- Once processed, the USDC (on ERC-20) will be delivered directly to your Exodus wallet, typically within 5–30 minutes depending on network traffic and provider.

9. **Verify receipt**:

- Return to the Exodus app and check your **Ethereum** or **USDC** balance.
- USDC should appear under your assets (it uses your Ethereum address on ERC-20).

10. **Purchase ETH for gas fees**:

- Repeat steps 1-9 to purchase ETH, but replace step 4 with this:
- **Choose Ethereum (ETH)**:
- Search for or scroll to **Ethereum** or **ETH** in the list of available cryptocurrencies.
- Select it—ETH is natively supported on the Ethereum network, so no additional chain selection is typically required (unlike multi-chain tokens like USDC).

Alternative if direct fiat buy isn't available for USDC in your region:

- Buy a supported crypto like USDT, ETH, or BTC via the in-app buy feature, then use Exodus's built-in **Exchange/Swap** tool to convert it to USDC (select USDC ETH as the target).

If you run into issues (e.g., provider not showing USDC on ERC-20), check for app updates or visit Exodus support for the latest details. Always start with small test amounts if you're new to the process!

****You can follow the steps outlined above to purchase USDT ERC-20. Just replace USDC with USDT (Tether USD) ETH in step 4.****

****To purchase USDT TRC-20, it will also be the same steps but choose USDT (Tether USD) TRX in step 4. Gas money for USDT TRC-20 will be Tron (TRX) instead of ETH (Ethereum)**
